

Project Proposal: Dating Application with Voice & Video Call

1. Project Overview

This proposal outlines the development of a modern dating & social-connections mobile application—modeled on the referenced app “DOSTT”—featuring integrated real-time voice and video calls, a coin-based interaction model, and a robust administrator dashboard. The platform will deliver a seamless, secure, and scalable experience for users and administrators alike while automating the coin/ subscription logic for monetisation, ensuring high engagement, retention and operational oversight.

---

2. Project Objectives

- Develop a high-quality mobile application for Android (and optionally iOS) that enables users to discover, connect and communicate in real-time.

- Incorporate real-time communication (voice calls and high-definition video calls) between users.

- Implement a coins-and-subscription monetisation model: users purchase coins or subscribe to plans and use them for interactions (calls, chats, gifts).

- Provide a comprehensive web-based admin dashboard allowing full control over users, agents (verified partners), coins, subscriptions and reporting.

- Automate coin allocations when subscriptions are purchased, and manage agent earnings, interactions and coin flows efficiently.

---

3. Key Features

User Features

1. **User Registration & Profile Setup**
    - Registration via mobile number, email or social login (Google/Facebook/Apple).
    - Create and customise profiles: upload images, set interests, location preferences, bio and other personal details.
2. **Match & Connect**
    - Swipe-based or list-based user discovery to view potential matches.
    - Filter options by gender, age, distance/radius, interests.
    - Option to send friend requests, match invitations, or initiate chat/call.
3. **Communication System**
    - Text chat with emojis, stickers, GIFs and media sharing (images/videos).
    - Real-time voice calls between users.
    - High-quality video calls between users.
    - Optional coin deduction per minute for voice/video calls or for access to premium chats.
4. **Coins & Subscription**
    - Users can purchase coins directly, or subscribe to premium plans which grant coins and additional privileges.

- Automatic allocation of coins to the user account once a subscription is successfully processed.

- Coins can be spent to unlock chat features, initiate voice/video calls, or send virtual gifts.

- Integration with a secure payment gateway for coin purchases and subscriptions.

5. **Agent Interaction**

    - Agents (verified dating-partners or service providers on the platform) can receive coins from users in exchange for calls/chats.

    - Agents have an interface/dashboard to view their earnings, activity summary, call durations, coin-flows and performance metrics.

Admin Panel Features

Super Admin

- Dashboard overview: total users, agents, revenue, active calls, new subscriptions, coin flow analytics.

- User management: view, edit, block or delete user accounts.

- Agent management: approve or reject agent status applications, view agent call logs, coin transactions, performance.

- Coin management: manual assignment of coins, configuration of automatic coin allocation per subscription plan.

- Subscription management: creation, editing and management of subscription plans, pricing, benefits, duration.

- Sub-admin management: creation of sub-admin accounts with role-based access and permissions.

- Analytics & reports: app usage statistics, revenue reports, agent performance dashboards, geolocation data, filters by time-period.

Sub-Admin

- Role-based access to specific modules (for example: user review, subscription monitoring, reporting only).
- Ability to manage limited functions of the admin panel depending on permissions assigned.

Additional Features

- Push notifications: for matches, chat messages, calls, subscription renewals, coin purchases.
- Status indicators: online / offline users, “in-call” status, last-seen/time.
- In-app help & support system: users can raise tickets, submit feedback, view FAQs.
- Secure API endpoints and data protection mechanisms (encryption, secure tokens, role-based access control).
- Support for localisation (language support) and multi-region deployment if required.

---

4. Budget Breakdown (Total: ₹2,50,000)

Module Description	Estimated Cost
UI/UX Design (Mobile app + Web admin panel)	₹25,000
App Development (Frontend) – React Native for Android (and optionally iOS)	₹60,000
Backend API Development – Laravel / Node.js with authentication, user, agent, coin logic, subscription logic	₹50,000
Admin Panel Development – Web-based admin system with sub-admin access	₹35,000
Voice & Video Integration – WebRTC / Agora / Twilio SDK	₹40,000
Payment Gateway & Subscription Setup – e.g., Razorpay / Stripe integration + automation	₹25,000

Testing, QA & Deployment – Multi-device testing, bug-fixing, store submission	₹15,000
Total Project Cost	**₹2,50,000 (Rupees Two Lakh Fifty Thousand Only)**

---

5. Timeline

Phase	Description	Duration
Phase 1: Planning & Design	Requirement gathering, wireframes, UX/UI design	2 weeks
Phase 2: Core Development	Frontend mobile app + backend APIs + database setup	6 weeks
Phase 3: Feature Integration	Calls, payment integration, subscription system, coin logic, agent flows	3 weeks
Phase 4: Testing & Deployment	QA, bug-fixing, app store submission, post-launch setup	2 weeks
Total Duration	**Approximately 13 weeks (~3 months)**	

---

6. Technology Stack

Category	Technology
Frontend (Mobile App)	React Native (using Expo or Bare workflow)
Backend	Laravel or Node.js (Express)
Database	MySQL or PostgreSQL
Real-time Communication	WebRTC / Agora SDK / Twilio SDK
Payment Gateway	Razorpay / Stripe
Push Notifications	Firebase Cloud Messaging (FCM)
Admin Panel	React.js or Vue.js (consuming REST APIs)
Hosting / Infrastructure	AWS / DigitalOcean / Hostinger VPS (as per scale)

---

7. Deliverables

- Fully functional Android mobile application (and optionally iOS version if agreed).
- Web-based admin dashboard (with super-admin & sub-admin roles).
- Fully documented backend APIs (including authentication, user flows, agent flows, coin/subscription logic).
- Complete source code for mobile app, backend, and admin panel.
- Deployment guide and maintenance manual.
- 3 months of free post-launch support (bug-fixes, minor updates, small enhancements) included.

---

8. Payment Terms

Milestone	Payment (%)
Project Initiation & UI Approval	20%
Backend & App Core Completion	30%
Integration of Voice/Video & Admin Panel	30%
Final Testing & Deployment	20%

Best Regards,
Gowtham
